MediSarthi

AI-Powered Rural Healthcare Platform

Business Plan Presentation

EP&P Assignment 2

Executive Summary

MediSarthi is an AI-powered healthcare platform designed to bridge the critical healthcare gap in rural India. Our mission is to provide affordable, accessible, and accurate medical guidance to underserved populations through an evolutionary AI approach.

Mission	Democratize healthcare access for 700M+ rural Indians using AI technology
Vision	A world where geography doesn't determine health outcomes
Solution	Three-stage AI evolution: Offline Rule-Based → ML Prediction → Advanced Telemedicine
Impact	Early disease detection, reduced hospital dependency, affordable care for all

Problem Statement

70%	1:25,000	60%	30%+
Rural population underserved	Doctor-patient ratio in rural	Out-of-pocket health expenses	Diseases diagnosed too late

- Shortage of qualified doctors in rural areas
- Poor medical infrastructure and diagnostic facilities
- Limited or no internet connectivity in remote villages
- Delayed disease diagnosis leading to severe outcomes
- Existing AI solutions are urban-focused, expensive, and internet-dependent

Our Solution

Three-Stage AI Evolution for Rural Healthcare

Stage 1: Rule-Based AI

Offline

- Works without internet
- Basic symptom analysis
- Ideal for remote villages
- Instant guidance

→

Stage 2: Machine Learning

Smart

- Disease prediction models
- Pattern recognition
- Improved accuracy
- Early detection

→

Stage 3: Advanced AI

Connected

- Video telemedicine
- Voice assistance
- Health analytics
- Outbreak prediction

Market Analysis

TAM

$12B

Total Indian Healthcare IT

SAM

$3.5B

Rural Digital Health Market

SOM

$150M

AI Rural Health First 5 Years

Target Audience

- Rural patients (700M+ population)
- ASHA & frontline health workers
- PHC doctors & specialists
- Government health departments
- NGOs working in rural health

Competitive Advantage

- Offline-first (unlike Practo, 1mg)
- AI + Telemedicine combined
- Rural-focused UX
- Government-aligned (NHM)

Business Model

Freemium SaaS

Free basic symptom checker.
Premium AI predictions &
telemedicine at low cost.

B2G Contracts

Partner with state governments
under National Health Mission
for deployment at PHCs.

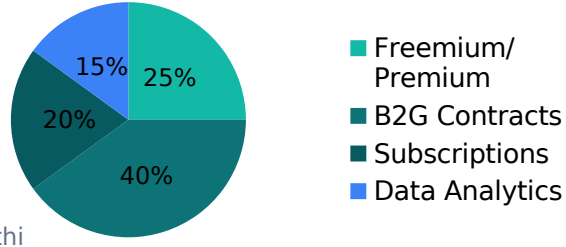
Subscription

Monthly plans for doctors
and health workers for advanced AI tools.

Data Insights

Anonymized health analytics
for pharma companies and
research institutions.

Projected Revenue Split (Year 3)



Product / Service Development

Patient Module

- Offline symptom checker
- AI health predictions
- Voice interface in local languages
- Medication reminders

Health Worker (ASHA)

- Patient registration
- Vitals capture
- AI-assisted triage
- Follow-up tracking

Doctor Module

- Video consultation
- AI-generated reports
- Digital prescriptions
- Remote monitoring

Admin Dashboard

- District analytics
- Outbreak prediction
- Resource planning
- Performance metrics

USP: Offline-first AI + Telemedicine + Multilingual Voice Interface — designed for rural India

Marketing & Sales Strategy

Government Partnerships

- Integrate with National Health Mission
- PHC & sub-center deployment
- ASHA worker training programs

Community Outreach

- Health camps in villages
- Word-of-mouth via ASHA workers
- Local language awareness drives

Digital Marketing

- Social media campaigns
- YouTube health education content
- WhatsApp-based engagement

Strategic Alliances

- NGO partnerships
- Pharma company collaborations
- Medical college tie-ups

Operations Plan

Team Structure

AI/ML Engineers	2-3
Full-Stack Developers	2
Healthcare Domain Expert	1
Community Outreach	2
Business & Operations	1

Technology Stack

Frontend	React, TypeScript, Tailwind CSS
Backend	Supabase, Edge Functions
AI/ML	Rule-Based + ML Models
Voice	Web Speech API, TTS
Video	WebRTC, Telemedicine

Development Roadmap

Q1-Q2
MVP Launch
Offline symptom checker

Q3-Q4
ML Integration
Disease prediction

Year 2
Telemedicine
Video consultations

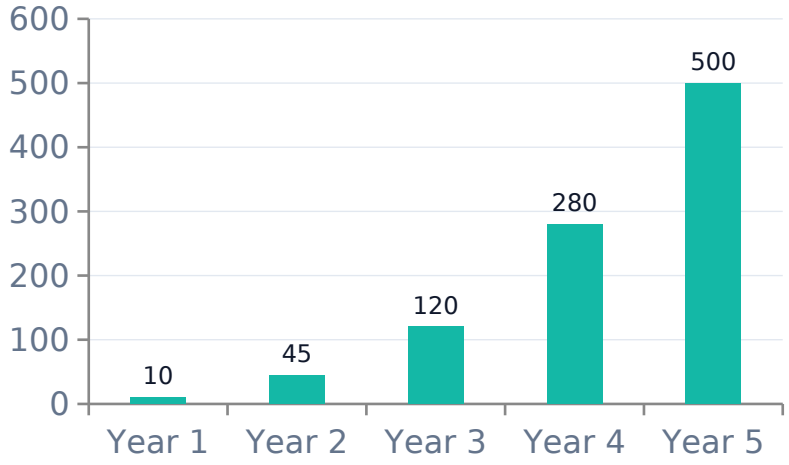
Year 3
Scale
Pan-India expansion

Financial Projections

Startup Costs

Development & Tech	₹15L
Cloud & Infrastructure	₹3L
Marketing & Outreach	₹5L
Operations & Salaries	₹12L
Miscellaneous	₹5L
Total (Year 1)	**₹40L**

Revenue Projection (₹ Lakhs)



Break-Even Analysis

Expected break-even by end of Year 2 with 50,000+ active users. Gross margins of 70%+ due to low marginal cost of AI-driven services. Funding requirement: Seed round of ₹50 Lakhs.

Risk Assessment & Mitigation

Risk	Severity	Mitigation Strategy
Low Digital Literacy	High	Voice-based interface, multilingual support, pictorial UI
Internet Connectivity	High	Offline-first architecture, local data storage, sync when online
Regulatory Compliance	Medium	Medical disclaimer on all outputs, alignment with ABDM standards
Data Privacy	Medium	End-to-end encryption, HIPAA-aligned practices, local storage
User Adoption	Medium	ASHA worker onboarding, community health camps, free tier
AI Accuracy	High	Continuous model training, doctor validation, conservative predictions

Thank You

MediSarthi — Transforming Rural Healthcare with AI

Future Roadmap

- Multilingual & voice-based interaction
- Wearable health device integration
- Government health record integration (ABDM)
- Advanced AI models for outbreak prediction
